# Product Requirements Document (PRD): Porter-Style Delivery Platform

Document 5 of the pack | Version 0.2 (draft) | Scope: Stage 1 App MVP, Melbourne Builds on: Idea Brief v0.4, Competitive and Market Analysis v0.1, Business Model and Unit Economics v0.2, MVP and Risk Register v0.1
Product name: Working title only (name to be decided). Labels: FACT, ASSUMPTION, RISK, OPPORTUNITY, RECOMMENDATION, OPEN QUESTION. Requirement IDs (FR-, BR-, AC-) are for traceability. Numeric values marked *(proposal)* are starting points to be tuned in the Stage 0 pilot.

---

## 1. Purpose and summary

Purpose: Define what must be built for the Stage 1 app MVP so that a designer, developer or AI can build it without relying on earlier conversations.
Summary: A two-sided marketplace that lets people and businesses book delivery of bulky or mixed-size items in Melbourne at an instant fixed price. The platform matches each job to a nearby verified independent driver with a suitable vehicle, tracks it, collects photo proof of delivery, takes payment, and pays the driver. The platform keeps a commission.

## 2. Background and problem

- Moving a couch or appliance across the city means negotiating on task marketplaces, calling van operators, or borrowing a vehicle. Parcel apps cannot carry bulky items (for example, Uber Connect is limited to a car boot, 20 kg and low-value items).
- FACT: Established courier platforms (Zoom2u, GoPeople, Sherpa) already offer on-demand delivery, and Zoom2u and GoPeople state they cover vehicles from bikes to trucks (company claims). See Document 2.
- Hypothesis: A consumer-friendly, fixed all-in price for specific bulky-item jobs is still under-served.
- Drivers with vans and utes have inconsistent work and no easy way to find jobs.

## 3. Vision, goals and non-goals

Vision: The simplest way to get anything moved across the city, at a price you can see before you book.
Goals of the MVP

1. Let a customer book, pay and track a delivery in under 3 minutes (*proposal*).
2. Match at least 85% of requests to a driver (*proposal*).
3. Give drivers clear earnings before they accept and weekly payouts.
4. Give admins enough control to fix problems manually.
5. Collect the data needed to test the four hypotheses in Document 4, Section 1.

Non-goals (not in this release)

- Trucks and heavy freight; quick commerce or grocery shopping (parked)

- Surge pricing, subscriptions, an enterprise API, recurring jobs, instant payouts
- Coverage outside the launch corridor; interstate or multi-day jobs
- Moving services requiring packing or furniture assembly

# 4. Target users and personas (illustrative)

| Persona | Description | Main needs |
|---|---|---|
| Sam, Marketplace buyer (consumer) | Bought a couch online; has no suitable vehicle | Fixed price, same-day pickup, trust, simple booking |
| Jo, small furniture store owner (anchor SMB) | Delivers several items a week | Reliable drivers, receipts, repeat booking, proof of delivery |
| Dan, ute owner-driver (driver) | Wants flexible extra income | See pay upfront, steady jobs, fast payout, fair treatment |
| Alex, operations admin | Runs dispatch and support during the pilot | Live view, overrides, dispute tools, reports |

# 5. Primary use cases

1. Book a single bulky item for same-day delivery.
2. Book an urgent (within 1 hour) delivery of a parcel or small item.
3. Request a small move for an admin-confirmed hourly or fixed price.
4. Business customer books repeat deliveries with receipts showing business name and ABN.
5. Driver goes online, accepts a job, completes it and gets paid.
6. Admin reassigns a job after a driver cancels.
7. Customer reports damage; admin resolves the case.

# 6. User roles and permissions

| Role | Can do | Cannot do |
|---|---|---|
| Customer | Create, pay for, track, cancel (within rules) and rate own jobs; view own history; report issues | See other customers' jobs; see driver's personal documents |
| Driver | Manage own profile and documents; go online; view and accept offers; update job status; view own earnings | See customer's full contact details before acceptance; see other drivers' data |
| Admin (support) | View all jobs; reassign; message users; handle disputes; refund within limits | Change pricing rules; access payment provider settings |
| Admin (manager) | All support permissions, plus edit pricing settings, approve or suspend drivers, approve refunds above limits | Edit audit logs |

All admin actions are recorded in an audit log (FR-90).

# 7. Core user journeys

### 7.1 Customer: book and track

1. Opens app, signs up or in.
2. Enters pickup and drop-off addresses.
3. Describes the item, selects a size category, adds photos.
4. Selects stairs, helper and time option (flexible window, within 3 hours, within 1 hour).
5. Sees the vehicle recommendation and fixed price.
6. Pays (card or wallet pre-authorisation).
7. Receives driver assignment, tracks the driver, gets arrival alerts.
8. Receives pickup and delivery photos, then a receipt.
9. Rates the driver.

### 7.2 Driver: complete a job

1. Signs up, uploads documents, waits for approval.
2. Goes online. Receives an offer showing pickup area, drop-off area, distance, item details, time tier and earnings.
3. Accepts within the time limit.
4. Navigates to pickup, confirms arrival, photographs the item, confirms pickup.
5. Navigates to drop-off, confirms arrival, photographs delivery, optional recipient code.
6. Job completes; earnings are added to the weekly balance.

### 7.3 Admin: handle an exception

1. Sees an alert (no driver found, late job, dispute).
2. Opens the job; manually offers it to specific drivers or reassigns.
3. Adds notes and, if needed, refunds or adjusts driver pay.

## 8. Job lifecycle

| State | Meaning | Next states |
|---|---|---|
| Draft | Customer is building the booking | Quoted |
| Quoted | Price shown | Booked, expired |
| Booked | Payment pre-authorised | Searching, cancelled |
| Searching | Offers going out to drivers | Assigned, unmatched |
| Assigned | A driver accepted | En route to pickup, cancelled, reassigned |
| En route to pickup / At pickup | Driver heading to or at pickup | Picked up, failed pickup |
| Picked up / En route to drop-off / At drop-off | In transit | Delivered, failed delivery |
| Delivered | Proof captured | Completed |
| Completed | Payment captured; driver credited | Disputed |
| Cancelled | By customer, driver or admin | none |

| | | |
|---|---|---|
| Unmatched | No driver accepted within the search window | Booked again, cancelled, manual dispatch |
| Disputed | Issue raised | Resolved (refund, adjustment or no action) |

# 9. Functional requirements

## 9.1 Accounts and authentication

| ID | Requirement |
|---|---|
| FR-01 | Users sign up with phone or email and verify it with a one-time code |
| FR-02 | A user can be a customer, a driver, or both, with separate profiles |
| FR-03 | Customer profile supports consumer and business type; business type stores business name and ABN |
| FR-04 | Admins sign in with email, strong password and two-factor authentication |
| FR-05 | Users can delete their account; data kept only as law or dispute handling requires |

## 9.2 Booking and quoting

| ID | Requirement |
|---|---|
| FR-10 | Customer enters pickup and drop-off addresses with address search; route distance is calculated |
| FR-11 | Customer describes items with a text description, size category (envelope, small, medium, large, bulky), approximate weight, and up to 5 photos |
| FR-12 | System recommends a vehicle class (bike or car, van or ute) based on size and weight; customer may choose a larger class |
| FR-13 | Customer selects a time option: flexible window, within 3 hours, within 1 hour |
| FR-14 | Customer can add stairs (number of flights), a second person for carrying (two-person carry), and notes for pickup and drop-off |
| FR-15 | System shows an all-in fixed price calculated from the rate card (Section 10) before payment |
| FR-16 | A quote is valid for 15 minutes *(proposal)*; after that it is recalculated |

| | |
|---|---|
| FR-17 | Items outside limits or on the banned list are rejected with a clear message |
| FR-18 | "Small move" requests go to an admin for confirmation of hourly or fixed price; the customer is notified and accepts or declines |
| FR-19 | Customer can book on behalf of someone else by adding a recipient name and phone number |

## 9.3 Payment

| ID | Requirement |
|---|---|
| FR-20 | Card or wallet payment is pre-authorised at booking and captured on completion |
| FR-21 | Receipts are generated per job, including GST, and include business name and ABN for business customers |
| FR-22 | Refunds are possible in full or part, by an admin, and recorded with a reason |
| FR-23 | Price changes after booking (extra wait, added stop) require customer approval in-app |
| FR-24 | Driver payouts are made weekly; earnings per job show gross, commission, adjustments and net |
| FR-25 | The platform keeps a commission configured in settings; it is stored per job at the time of booking |

## 9.4 Matching and dispatch

| ID | Requirement |
|---|---|
| FR-30 | When a job is booked, the system finds online, approved drivers with a suitable vehicle class inside a search radius |
| FR-31 | Offers go to the nearest eligible driver first; if declined or timed out (30 seconds *(proposal)*), the next driver receives it |
| FR-32 | The search radius widens in steps until a driver accepts or the search window ends (10 minutes for urgent jobs, longer for flexible-window jobs; *proposal*) |
| FR-33 | Flexible-window jobs can be offered to drivers in advance with a window start and end |
| FR-34 | If no driver accepts, the job becomes Unmatched and the customer and admin are notified |
| FR-35 | Admins can manually offer or assign any job to any approved driver |

| | |
|---|---|
| FR-36 | Drivers can see offers but not the customer's phone number or exact address before accepting; only a drop-off suburb and approximate pickup location |

## 9.5 Job execution and tracking

| ID | Requirement |
|---|---|
| FR-40 | Driver updates status at each step; the customer sees status changes in real time |
| FR-41 | Driver location is shared with the customer from assignment until delivery |
| FR-42 | The driver captures at least one photo at pickup and one at drop-off |
| FR-43 | An optional recipient code can be required at drop-off |
| FR-44 | Waiting time is measured from arrival; after the free period, charges accrue per minute (values in settings) |
| FR-45 | A driver can report a problem (item not ready, item too large, no access, unsafe situation) and the admin is alerted |
| FR-46 | A failed delivery requires a reason and photos and is reviewed by an admin |

## 9.6 Cancellations

| ID | Requirement |
|---|---|
| FR-50 | Customers can cancel free until a driver is assigned; after that a cancellation fee applies (amount in settings) |
| FR-51 | Drivers can cancel before pickup; cancellations are counted and reviewed |
| FR-52 | Admins can cancel and refund any job |

## 9.7 Ratings and issue handling

| ID | Requirement |
|---|---|
| FR-60 | Customers and drivers rate each other (1 to 5 stars and an optional comment) after completion |
| FR-61 | Customers can report an issue (damage, lateness, behaviour, wrong item) with photos within 48 hours *(proposal)* |
| FR-62 | Admins manage cases with notes, status, decisions, refunds and driver deductions |

## 9.8 Driver onboarding

| ID | Requirement |
|---|---|
| FR-70 | Drivers submit identity, driver's licence, vehicle details and photos, ABN, vehicle insurance evidence, and any checks required by legal advice |
| FR-71 | Admins review, approve, reject or request more information |
| FR-72 | Drivers must accept the driver terms before going online |
| FR-73 | Documents are stored securely and visible only to approved admins |
| FR-74 | The system tracks document expiry and blocks drivers whose documents lapse |

## 9.9 Notifications

| ID | Event | Recipient | Channel |
|---|---|---|---|
| FR-80 | Booking confirmed | Customer | Push, email |
| FR-81 | Driver assigned | Customer | Push, SMS |
| FR-82 | Driver approaching and arrived | Customer | Push |
| FR-83 | Delivered with photo | Customer | Push, email |
| FR-84 | New offer | Driver | Push |
| FR-85 | Job changed or cancelled | Customer, driver | Push, SMS |
| FR-86 | Unmatched job, late job, new dispute, new driver application | Admin | Dashboard, email |
| FR-87 | Payout processed | Driver | Push, email |
| FR-88 | Document expiring | Driver | Push, email |

## 9.10 Admin

| ID | Requirement |
|---|---|

| | |
|---|---|
| FR-90 | Every admin action (price change, refund, assignment, suspension) is logged with user, time and before/after values |
| FR-91 | Live job list with filters (status, time, area, vehicle class) and map view |
| FR-92 | Rate card editor: base rates, urgency tiers, add-ons, commission, waiting charges, with effective dates |
| FR-93 | Driver management: approve, suspend, view jobs and earnings, view ratings and cancellations |
| FR-94 | Customer management: view account, jobs, refunds, flags |
| FR-95 | Manual job creation on behalf of a customer |
| FR-96 | Reports in Section 15 and CSV export |

# 10. Pricing requirements

- FR-100: Price is computed from a configurable rate card, not hard-coded.
- FR-101: Inputs: vehicle class, route distance, estimated time, time option, stairs flights, helper, waiting time, area.
- FR-102: Time options carry configurable multipliers or fixed uplifts.
- FR-103: A minimum job price per vehicle class is configurable.
- FR-104: Initial values come from the pilot. The Zoom2u quotes in Document 3 (for example, couch same-day $41, within 3 hours $51, within 1 hour $88; stairs about +10$) serve as the starting benchmark only.
- FR-105: Every quote is stored with the rate card version used.
- FR-106 (decided): The standard price includes the driver carrying the item for loading and unloading. The customer is not expected to help.
- FR-107: A second person for carrying is a paid add-on, chosen by the customer at booking when they believe two people are needed.
- FR-108: A single-driver weight and size limit is set per vehicle class in settings. Items above the limit require the two-person add-on, and the booking cannot proceed without it.
- FR-109: If a driver reports on arrival that an item is too heavy or awkward for one person, the admin can add the two-person add-on (with customer approval, FR-23) or cancel with a refund.

# 11. Business rules

| ID | Rule |
|---|---|
| BR-01 | Price is fixed at booking; it changes only for customer-initiated changes, extra waiting time or approved additions |
| BR-02 | Drivers see their net earnings before accepting a job |

| | |
|---|---|
| BR-03 | Commission is recorded per job at booking and does not change retroactively |
| BR-04 | Drivers are independent contractors; the platform does not set hours or require acceptance of jobs. Wording and treatment depend on legal advice (Document 4, R6) |
| BR-05 | Banned items: dangerous goods, weapons, drugs, live animals, cash, items above the value cap (value to be defined) |
| BR-06 | Maximum item size and weight are set per vehicle class |
| BR-07 | Contact details are masked from the other party until the job is accepted |
| BR-08 | Driver payout happens only after the dispute window closes or an issue is resolved |
| BR-09 | Drivers with repeated cancellations or low ratings receive warnings, then suspension |
| BR-10 | Only approved drivers with unexpired documents can go online |
| BR-11 | The driver carries the item at pickup and drop-off; the customer is not required to help. Two-person carry is a paid add-on |

# 12. Screens and navigation

Customer app

| Screen | Purpose |
|---|---|
| Welcome and sign in | Sign up or log in |
| Home | Start a booking; view active job; recent addresses |
| Booking: addresses | Pickup and drop-off |
| Booking: item | Description, size, photos |
| Booking: options | Time option, stairs, helper, notes |
| Quote and pay | Vehicle, price breakdown, payment method |
| Finding a driver | Searching state, cancel option |
| Live job | Map, driver details, status, chat or call (post-MVP) |
| Delivery complete | Photos, receipt, rating |
| Job history | List and details |
| Help and issue report | FAQ, report an issue with photos |

| | |
|---|---|
| Account | Profile, payment methods, business details |

Driver app

| Screen | Purpose |
|---|---|
| Sign up and documents | Onboarding and status |
| Home | Go online or offline; current job |
| Offer | Job summary, earnings, accept or decline |
| Active job | Status buttons, navigation, notes, report problem |
| Proof capture | Photos and code entry |
| Earnings | Per job and weekly totals, payout history |
| History and ratings | Past jobs and feedback |
| Account | Profile, vehicle, documents, bank details |

Admin dashboard: Jobs, Map, Drivers, Customers, Disputes, Pricing, Reports, Settings, Audit log.
Navigation: Customer app uses bottom tabs (Home, Jobs, Help, Account). Driver app uses bottom tabs (Home, Earnings, Jobs, Account). Admin uses a left menu.

# 13. Search and filtering

- Customer: search addresses; filter job history by status and date.
- Driver: filter job history and earnings by date.
- Admin: search jobs by ID, customer, driver, address; filter by status, time, area, vehicle class, dispute state; search users by name, phone, email.

# 14. Integrations (needs, not product choices)

| Need | Purpose |
|---|---|
| Maps and routing | Address search, route distance, live tracking, navigation handoff |
| Payments and payouts | Card pre-authorisation, capture, refunds, marketplace payouts to independent drivers |
| SMS and push | Notifications and verification codes |
| Email | Receipts and alerts |
| Identity and background checks | Driver verification (as required by legal advice) |
| Analytics | Usage and funnel data |

Technology: Not prescribed. OPEN QUESTION: native vs cross-platform mobile apps is a trade-off between development cost and device-specific performance. To decide after Stage 0.

# 15. Data requirements

| Entity | Key information |
|---|---|
| User | ID, contact details, roles, status, created date |
| Customer profile | Type (consumer or business), business name, ABN, saved addresses, payment methods |
| Driver profile | Status, vehicle(s), service area, rating, cancellation count, bank details |
| Driver document | Type, file, expiry, review status, reviewer |
| Job | ID, customer, driver, state, addresses, time option, vehicle class, price, commission, times, rate card version |
| Job item | Description, size, weight, photos, notes |
| Job event | Every status change with time and location |
| Quote | Inputs, price breakdown, validity |
| Payment | Authorisation, capture, refund records |
| Payout | Driver, period, amounts, status |
| Rating | Job, rater, rating, comment |
| Dispute | Job, reason, photos, status, decision, amounts |
| Rate card | Version, values, effective dates, who changed it |
| Notification log | Message, channel, status |
| Audit log | Admin actions with before and after values |

Retention: Job, payment and tax records kept as required by law. Location trails kept for a limited period (*proposal*: 90 days). Documents kept only while the driver is active plus a legally required period.

# 16. Analytics and reporting

| Report | Contents |
|---|---|
| Daily operations | Jobs by status, match rate, on-time rate, unmatched jobs |
| Marketplace | Online drivers by hour, offers sent and accepted, time to match |
| Finance | GMV, revenue, direct costs, contribution per job, refunds |
| Driver | Jobs, earnings per hour, acceptance rate, cancellations, ratings |
| Customer | New vs repeat, rebooking rate, funnel drop-off (quote to booked) |
| Quality | Damage and dispute rate, ratings |

These match the pilot metrics in Document 4, Section 6.

# 17. Non-functional requirements

| Area | Requirement |
|---|---|
| Performance | Quote in under 3 seconds; offers delivered within 5 seconds (*proposals*) |
| Availability | High availability during operating hours; planned maintenance outside peak |
| Security | Encryption in transit and at rest; role-based access; two-factor for admins; audit logs; secure document storage |
| Privacy | Collect only what is needed; consent for location and photos; compliance with Australian privacy law (to be confirmed by legal advice); masked contact details |
| Accessibility | Readable text, sufficient contrast, scalable fonts, labels for screen readers |
| Devices | Recent iOS and Android versions; responsive web for booking and admin |
| Offline and poor signal | Status updates queue and retry; clear messages when the network drops |
| Scalability | Designed for the corridor at launch; growth to Greater Melbourne is a future requirement |

# 18. Error handling and edge cases

| Situation | Expected behaviour |
|---|---|
| Address not found or outside launch area | Clear message; allow manual pin or reject |
| Payment authorisation fails | Booking not created; show error and options |
| No driver found | Customer notified; options to wait, raise price tier, reschedule or cancel with full refund |
| Driver cancels after assignment | Job returns to Searching; customer notified; admin alerted if urgent |
| Driver arrives and item is larger than described | Driver reports; admin contacts customer; options to change vehicle, add helper or cancel with fee |
| Recipient not available | Driver waits the free period, then contacts customer; failed-delivery process |
| Customer disputes after delivery | Driver payout held; admin reviews photos and events |
| GPS drops mid-job | Last known location shown; status updates continue |
| Quote expires before payment | Recalculated; customer sees the change |

| | |
|---|---|
| Admin changes rate card | Applies only to new quotes; existing bookings keep their price |
| Duplicate account or fraud suspicion | Admin can flag, hold payouts and suspend |
| Driver documents expire | Driver is blocked from going online until updated |

# 19. MVP scope summary

In: Everything in sections 9 to 18 unless marked post-MVP. Post-MVP: automatic small-move quoting, business invoicing, recurring and scheduled jobs, instant payouts, promo codes and referrals, in-app chat and masked calls, dynamic pricing. Future: trucks, subscriptions, enterprise API, batching and route optimisation, expansion, quick commerce (parked).

# 20. Dependencies, risks and assumptions

Dependencies: insurance; legal advice on driver terms; payments provider that supports marketplace payouts; a verified first group of drivers; terms of service and banned-items list; Stage 0 pilot data to set the rate card. Risks: See Document 4, Section 8. The most important for this PRD are R1 (supply), R2 and R3 (pricing and driver pay), R6 (regulation) and R7 (insurance). Assumptions:

1. Platform-set fixed price (drivers do not bid).
2. Standard price includes carrying by the driver; a second person is a paid add-on (decided).
3. Zoom2u prices are the starting benchmark only.
4. Launch area is the Footscray, CBD and Richmond corridor.

# 21. Acceptance criteria (key examples)

| ID | Given / When / Then |
|---|---|
| AC-01 | Given valid addresses and an item in limits, when the customer completes the booking form, then a fixed price and recommended vehicle are shown within 3 seconds |
| AC-02 | Given a quote, when the customer pays, then the card is pre-authorised and the job enters Searching |
| AC-03 | Given a Searching job, when the nearest eligible driver declines or times out, then the next eligible driver is offered the job automatically |
| AC-04 | Given a job offer, when a driver views it, then net earnings are shown and the customer's phone number and exact address are not |
| AC-05 | Given an accepted job, when the driver marks delivered without a drop-off photo, then the app blocks completion and asks for a photo |
| AC-06 | Given a completed job, when the dispute window passes with no issue, then payment is captured and the driver's earnings are added to the weekly payout |
| AC-07 | Given no driver accepts within the search window, when the window ends, then the job becomes Unmatched, the customer is notified and the admin is alerted |

| | |
|---|---|
| AC-08 | Given a rate card change by a manager, when it is saved, then it is recorded in the audit log and applies only to new quotes |
| AC-09 | Given a driver with an expired insurance document, when they try to go online, then the app blocks them and explains why |
| AC-10 | Given a customer-reported damage case, when an admin resolves it, then the decision, refund amount and any driver deduction are stored and visible in the case history |

# 22. Open questions before development starts

1. Single-driver weight and size limit per vehicle class, and the price of the two-person add-on (follows from FR-106 to FR-108)
2. Final launch area and service boundaries
3. Banned items list and maximum item value
4. Cancellation fee, free waiting time and waiting charge values
5. Dispute window length
6. Native vs cross-platform apps
7. Background-check requirements for drivers (legal advice)
8. Product name

# 23. Next documents

1. Go-to-Market Strategy (driver supply plan, consumer lead use cases, anchor SMBs)
2. Stage 0 pilot plan
3. Developer handoff (implementation-oriented version of this PRD with data model and API outline)
